PROFESSIONAL SUMMARY

Software Development Engineer with 6 years of experience architecting and delivering scalable cloud-based systems at enterprise scale. Proven track record at Amazon building high-impact services processing thousands of daily requests across 67 countries. Organization-wide hackathon winner leveraging AI to automate workflows. Skilled in AWS infrastructure, full-stack development, and leading cross-functional teams in agile environments, and shipping independent mobile and ML projects. Business-level Japanese proficiency (JLPT N2).

PROFESSIONAL EXPERIENCE

Amazon | Boston, MA

Software Development Engineer II Dec 2021 – Jan 2025

- Led 3 engineers to architect API Gateway and Lambda middleware (Kotlin, Python) bridging new and legacy onboarding systems, enabling phased regional rollout with automatic rollback for ~1–2K new candidates ingested weekly out of ~7K corporate hires
- Won first place in an organization-wide hackathon by building an AI-powered ticket triage system that categorized and auto-responded to support requests using AWS Bedrock, Lambda, SNS, SQS, DynamoDB, React, and TypeScript
- Led an 8-person cross-functional team as Scrum Master to ship a personal information management portal on AtoZ serving 1.5M employees, ensuring compliance with laws and regulations across 67 countries
- Designed a DynamoDB single-table data model with an OpenSearch analytics pipeline for long-term storage, supporting an onboarding system tracking ~15,000 concurrent candidates across 13 contingencies
- Developed a notification engine using DynamoDB, Lambda, and SNS that calculated and dispatched 80,000 reminder alerts within 6 months to employees with incomplete life events

The Cape Cod Five Cents Savings Bank | Hyannis, MA

Software Developer I Apr 2019 – Dec 2021

- Engineered a full CI/CD pipeline from development to production with automated regression testing using GitLab Runner, xUnit, and bUnit, reducing deployment risk and accelerating release cycles
- Saved over \$2,500 annually by designing multiple C# automation programs to replace licensed software, including a real-time ATM status monitoring tool running at one-minute intervals

SELECTED PROJECT

Mekuru | Japanese EPUB and Manga Reader | [Google Play](#)

- Built and published a Japanese reading app (Flutter, Dart, Riverpod, SQLite) with offline dictionary lookup via MeCab tokenization, vocabulary tracking with Anki export, and localization in 4 languages across 40+ releases
- Developed a companion OCR server (Python, FastAPI) using ML models for manga text detection and recognition, with Docker containerization for GPU-accelerated deployment and Firebase Cloud Functions (TypeScript) for service orchestration

TECHNICAL SKILLS

Cloud & Infrastructure: AWS (Bedrock, API Gateway, Lambda, DynamoDB, SNS, SQS, S3, Athena, QuickSight, Glue, OpenSearch), Firebase, Docker, CI/CD Pipelines

Languages: Kotlin, Python, Java, Dart, C#, SQL, TypeScript, JavaScript, HTML, CSS

Frameworks & Tools: AWS CDK/SDK, Flutter, React, FastAPI, Git, GitLab, GitHub Actions

EDUCATION

Japanese Language School | Tokyo, Japan

Intensive Japanese Language Program Apr 2025 – Present

University of California, Davis

Bachelor of Science in Computer Science March 2019
